

Manish Kumar

Full-Stack Developer | React / Next.js / Node.js

hello@manishai.xyz | +91 84354 28491 | [Portfolio](#) | [LinkedIn](#) | [GitHub](#)

SUMMARY

Full-stack developer with 8+ months shipping complete features across the stack — from database schema and API design to production React/Next.js interfaces. Comfortable working end-to-end on a project: backend architecture, third-party integrations, browser automation, and frontend delivery, without needing to hand off any part of the build.

EXPERIENCE

Full-Stack Developer — BoomX Media

Jun 2025 – Jan 2026

- Owned feature delivery end-to-end — from translating 20+ Figma designs into React components to building a self-serve automation tool that cut email template turnaround by 40%.
- Reduced repetitive internal workflows by shipping a browser extension that auto-generated message IDs, saving the team manual effort daily.
- Contributed to 4 revenue-driving features shipped as part of a company-wide growth initiative, working across UI, tooling, and deployment.

Full-Stack Developer — MyAppBroker (Freelance)

Jan 2025 – Mar 2025

- Delivered a client website from scratch — frontend, auth, and validation — lifting form submissions by 30%.
- Built the authentication and validation layer using Firebase, cutting invalid submissions by 36% for the client's lead pipeline.
- Set up a reusable component architecture that shortened build time and left a clean, maintainable codebase for handoff.

PROJECTS

FlowForge — Visual Pipeline Builder [view](#)

Aug 2026

React · ReactFlow · Zustand · FastAPI · Python

- Shipped a full-stack visual workflow builder — a React/ReactFlow canvas on the frontend backed by a FastAPI validation engine.
- Built a DAG cycle-detector using depth-first search so every pipeline is verified as executable before it runs.

Naukri Auto-Appplier [view](#)

Mar 2026

Node.js · Puppeteer · Puppeteer-Extra (Stealth) · XLSX · Dotenv

- Built an end-to-end automation pipeline that logs in, filters, and applies to 100+ jobs in 10-15 minutes.
- Added stealth browsing and human-like delays so the bot runs reliably at scale without tripping anti-bot defenses.

TinyLink — URL Shortener & Analytics [view](#)

Feb 2026

Next.js · TypeScript · Prisma · Neon PostgreSQL · Vercel

- Delivered a complete full-stack product — schema, API routes, and UI — for a company technical assessment.
- Built click analytics, custom short codes, and a health-check endpoint on top of a Prisma/PostgreSQL backend.

TECHNICAL SKILLS

Languages & Frameworks: JavaScript (ES6+), TypeScript, Python, React.js, Next.js, Node.js, Express.js, FastAPI

Databases: MongoDB, PostgreSQL, Neon, Prisma, JWT, Convex

Backend: REST API design, browser automation, authentication, server architecture

Tools & Platforms: Git, GitHub, Vercel, Render, Postman, ESLint

CERTIFICATIONS

The Web Developer Bootcamp — Udemy (Colt Steele), 74 hours,

Apr 2024

Artificial Intelligence Builder — FITT-IIT Delhi, 80 hours,

Jan–Mar 2024

EDUCATION

Electronics & Telecommunication Engineering
Jabalpur Engineering College, Madhya Pradesh
